

» ***HOT TERMINATION OF RUA*** »

FOR CASES IN WHICH A LABORATORY HAS NO RADIOISOTOPES ON

HAND AND HAS NO IMMEDIATE PLANS TO PURCHASE ANY

One option is to place the RUA into a "*hot termination*" status. RUAs in this category are terminated but can be reactivated easily within a few days if the need arises.

Once an RUA is placed into this status, no additional radiation safety tasks need to be performed by laboratory personnel (no wipe tests, no RUA renewals, no radioisotope inventories, etc.).

- ❖ All radioisotopes, including radioactive waste, must be removed from the lab prior to "hot termination"
- ❖ EH&S will perform a final radiation protection survey as needed and remove, obliterate or cover all radiation signs and labels.
