

Empty Hazardous Chemical Container Flowchart

For a hazardous chemical container to be considered empty:

Liquids	No liquid can drain from the container when tilted in any direction.
Solids	The walls of the container must be scraped clean and cannot contain any adhered or encrusted materials. Solids include powder, sludge, grease, thick resin, crystals, etc.
Aerosols	Must have the contents and pressure completely dispensed, the spray mechanism in place and functional.

Do not dispose of hazardous waste using sinks, drains, intentional evaporation, or as regular trash.

Follow the flowchart to appropriately manage your empty containers.
