University Hills	Recreation Center
<a href="#">Off Campus</a>	
Anza-Borrego Desert Research Center	Kitchen
Center for Occupational and Environmental Health	Exam Room
Susan Samueli Clinic	Treadmill Exam Room

## UC Irvine Campus Automated External Defibrillator (AED) Locations Frequently Asked Questions

### **1. What is an AED?**

An (AED) automated external defibrillator is a device that sends an electric shock to the heart that will restore the natural heart rhythm to the victim during cardiac arrest.

### **2. What happens during cardiac arrest?**

In cardiac arrest, or sudden cardiac death, the heart's electrical activity is disorganized and there is no effective pumping of blood. An AED is capable of recognizing the heart's electrical activity, determining if an electric shock is required, and restoring normal heart rhythm.

### **3. Are AED's safe?**

AED devices are safe. They are programmed to deliver shocks only when the heart rhythm is not effective and the electric shock is definitely required. If the shock is needed, a voice prompt in the AED is activated, instructing the rescuer to push a button to deliver the shock.

### **4. When should an AED unit be deployed?**

The device is only applied when a person has collapsed in cardiac arrest, has no effective breathing or coughing, and no movement.

### **5. What if someone applies it on a victim by mistake?**

An AED will not deliver an electric shock if applied by mistake to a person who has fainted or had a seizure.

### **6. How many AED's are on campus and where are they located and are they locked?**

A list of locations has been provided on the Front of this sheet. By law the AED's cannot be in a locked room during normal business hours and all cabinets are not locked and can be accessed by anyone trying to provide lifesaving assistance.

Please contact the Environmental Health and Safety AED Coordinator at 949-824-2041 for information on obtaining an AED for your location if interested.

### **7. Is there any special type training needed to operate an AED?**

CPR training is highly recommended. However, any person can operate an AED following the voice command instructions. The use of an AED in a lifesaving attempt is covered under California's Good Samaritan Law.
